***Achimota, Accra, Ghana, West
Africa***

I am willing to take half or even less of actual wage rate for my employer to assess me. Open for all remote works even typing. My typing speed is 50-60 words per minute.

But I am really a mid-senior level website developer. And not a single thing on this page is made up.

Objective

Highly skilled and dedicated Website Developer with 2 years of experience in HTML, CSS, JavaScript, WordPress and a whole lot [here](#). Proficient in Adobe Photoshop, Illustrator, After Effects, and Premiere. Seeking a challenging position to utilize my expertise and continue to enhance my skills in web development.

Education

St. John's Grammar Senior High, Accra, Ghana.

Despite my limited educational background, I have acquired exceptional skills in software development and website development that surpass those of my peers who have graduated in these fields. Through diligent self-study and online courses, I have mastered the necessary knowledge and techniques, driven mostly by curiosity, and love for programming and also the necessity to sustain myself financially.

Yet to learn **React**. I should mark typescript higher, but I haven't really created a site with it. Just use it partially. Will master it when doing react.

I am also familiar with **Liquid, Go and markdown**

Photoshop and illustrator for graphic design and creating icons.

Self Reliant : I always try to learn anything that comes in my way of developing a site.

Databases, WordPress and Git

I also do CI/CD. I am yet to learn dockers and containers. But I know about **Nginx**

For PHP I haven't really dive deep. Mostly use it for Drupal.

My scripts

Icons-table

With this script, all you need to create an svg is to add

```
<svg icon="name-of-icon"></svg>
```

you will have to refer the name from
tabler.io

.

There are 76 icons in this site and it's just 2 that were pasted. All the 74 others were added just by adding icon='icon-name' to an svg tag.

jsdelivr :

<https://cdn.jsdelivr.net/gh/legen07/iconstable@main/icons-table.js>

Github :

<https://github.com/legen07>

Auto model

This script let you show or hide a model just by naming your model with an Id then naming your model opener with the attribute model='id-of-model'. By add 'dp' to the model opener it can also close the model otherwise add close='id-of-model' to the close button.

You can also add additional functions if adding 'js' to the model is not enough for you. All you have to do is to create a function with the name of the id. If the id has more than

2 words ('the-id-name') use first and last words and you can run a whole function onclick.

With this Script you don't have to be adding numerous click event listeners.

jsdelivr

<https://cdn.jsdelivr.net/gh/legen07/iconstable@main/icons-table.js>

Github :

pop and shift slider

This is a unique algorithm for a carousel I created. It .pop and .unshift on 'prev' and does opposite on 'next'. I won't explain much. You can get in-touch for further explanation for this.

For it's unique feature, it can create a 3 layer carousel. And I searched throughout youtube and never found this kind of algorithm.
